EDUCATION

Bharati Vidyapeeth College of Engineering, Pune

Jul 2023 – Jul 2027 (Expected)

B.Tech in Computer Science & Engineering

GPA: 9.47 / 10.0

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Computer Networks, Machine Learning, DBMS, OOP, Linear Algebra

SKILLS

Languages: Python, Java, SQL

Frameworks & Tools: Spring Boot, FastAPI, FAISS, HuggingFace Transformers, LangChain, Docker, PostgreSQL, Git, OpenAPI/Swagger

Concepts: Distributed Systems, System Design, REST APIs, Data Structures, Algorithms, OOP, Multi-threading, Concurrency, Vector Search, RAG, Embeddings, NLP, ML Pipelines

WORK EXPERIENCE

Full Stack Developer Intern | Landmine Soft

Jan 2026 – Feb 2026

Java | Spring Boot | PostgreSQL | SQL | JWT Auth | RBAC | REST APIs | HTML/CSS

- Delivered a **production-ready College Management Portal** in 6 weeks by building 25+ JWT-secured REST APIs, modeling 11+ PostgreSQL entities with SQL constraints, and enforcing 3-tier RBAC across protected routes.
- Designed a layered Java Spring Boot backend with centralized exception handling and OpenAPI/Swagger documentation for 25+ endpoints, improving API contract clarity for frontend integration and review.

PROJECTS

Distributed Task Scheduling System

May 2025 – Jul 2025

Python | TCP Sockets | Multi-threading | Concurrency | Distributed Systems

 [GitHub](#)

- Architected a **multi-node task scheduler** over raw TCP sockets by distributing workloads across local and remote nodes with round-robin multi-threaded worker pools, demonstrating Distributed Systems and Concurrency fundamentals.
- Implemented **heartbeat-based fault detection** with automatic task re-queuing on node disconnect, preserving task execution under simulated network failure scenarios across the distributed topology.

Semantic Document Retrieval API

Apr 2026 – Jun 2026

Python | FastAPI | LangChain | FAISS | HuggingFace | Docker | Vector Search | RAG

 [GitHub](#)

- Built a **5-stage RAG pipeline** for PDF ingestion, text chunking, HuggingFace Embeddings, FAISS Vector Search, and ranked semantic retrieval, serving async requests through FastAPI endpoints and Docker containers with Git-tracked releases.
- Designed a modular LangChain architecture enabling independent benchmarking of embedding models with IR evaluation metrics such as NDCG@10, supporting data-driven model selection for retrieval quality.

Automated Job Search & Matching Pipeline

Oct 2025 – Dec 2025

Python | BeautifulSoup | NLP | TF-IDF | Algorithms

 [GitHub](#)

- Built an end-to-end **NLP data pipeline** scraping 100+ daily job listings from LinkedIn and TimesJobs, applying TF-IDF vectorization and cosine similarity algorithms to rank relevant roles and reduce manual filtering.

AWARDS & ACHIEVEMENTS

- NPTEL:** Scored 73/100 in DSA using Java and 73/100 in Programming in Java, strengthening Java, OOP, Data Structures, and Algorithms fundamentals.
- National Children's Science Congress (NCSC):** Earned national recognition for research on "Headphone Overuse Awareness," presenting the project at a national-level science forum.
